```

What are they?

- They are pattern matchers
- "A sequence of symbols and characters expressing a string or pattern to be searched for within a longer piece of text"
- They aren't just for programmers
- Often considered a write-only language

Where did they come from?

- Began with Ken Thompson with this article published in 1968
 - For the IBM 7094
 - Then the QED editor
- Lots of languages added to it
 - Perl has a great implementation of it, as does Ruby and lots of other languages

Where are they used?

- Validations
- Checking for spam
- Approximate matching
- Extracting important information
- Finding and replacing
- Automation lots of commands use this (e.g. grep)
- The meaning of life

```
- ^(?=(?!(.)\1)([^\DO:105-93+30])(?-1)(?<!\d(?<=
```

Approximate equality

```
"bob" == "bob"
# => true
"bob" =~ /bob/
# => 0
"Hello, my name is bob" =~ /bob/
# => 18
```

Ranges

```
"cat" =~ /[chs]at/
"bob" =~ /[Bb]ob/
"bob" =~ /[A-Z]ob/
"bob" = \sim /[A-Za-z]ob/
"012345" = ~ /[0-9]/
"012345" = ~/[^A-Z]/ # Anything but A-Z
```

Character classes

- \w any word character
- **\W** any non-word character
- \d anything that is a digit
- **\D** anything that isn't a digit
- **\s** any whitespace character
- **\S** anything but a whitespace character
- **\b** any word boundary
- **\B** any non-word boundary
- . any character except a new line

Character Classes

```
"this has word characters" =~ /\w/
"this has no numbers" =~ /\D/
"this has numbers 012" =~ /\d/
```

Quantifiers || Qualifiers

- * Zero or more times
- + One or more times
- ? Zero or one times (optional)
- {x} Exactly x times
- $\{x_i\}$ x or more times
- **{,y}** *y* or less times
- {x,y} At least x and at most y times

Repetition

```
"Arctic Arctic" =~ /(.*) \1 \1/
"oo book cook" =~ /(.*) b(\\1)k c(\\1)k/
"ababa" =\sim /(.)(.) \sqrt{1/2/1/}
```
